EXPERIENCE

Full Stack Product Engineer

2025 - 2026

MagicIntake

- Shipped an AI document-intake SaaS for a law firm client, reaching ~97% classification accuracy across ~1,200 documents and cutting intake handling time ~60%.
- Architected the stack: React/Vite client, Node APIs, Supabase Postgres with row-level security enforcing tenant isolation at the database layer.
- Built the n8n/GPT-4o-mini pipeline: routes by file type, generates prompts from per-team templates, validates output with fuzzy-match normalization and confidence capping.
- Deployed and operated the system on a self-managed VPS using Docker behind Traefik for routing and TLS, fronted by Cloudflare, with Twilio and Resend handling transactional messaging.
- Re-architected single-client to multi-tenant with per-org isolation, role-based access, and HIPAA-oriented controls.
- Led go-to-market through 3D motion content, paid ads, an internal CRM, and cold outreach, closing 5 paying clients and forming an LLC on the first. Prospect interviews surfaced the staffing pain point that became Casos.

Software Development Freelance

June 2024 - Present

Self-Employed

- Completed 16 builds generating \$22,000+ in revenue: 10 client sites with SEO and custom CMS for barbershops, salons, trainers, and restaurants; 3 barbershop operations apps; 2 behavior-tracking apps; and a peptide research lab site.
- Shipped a multi-tenant staff-management app to 3 barbershops with check-in, a peer-rating leaderboard, and structured biweekly reviews.
- Created behavior and task-tracking apps for fellow behavior technicians, with points redeemable for real-world rewards.
- Designed Arcila Method (arcilamethodpreview.netlify.app), a React/Supabase site with a private-gate CMS the owner runs herself, per-device art direction, and a scroll-driven hero on native browser APIs; root-caused a blank-gallery race condition to an observer running before async content mounted.
- Achieved 50%+ average engagement uplift over clients' prior booking pages by opening every engagement with workflow interviews.

Data Analyst Intern

Sept 2023 - Dec 2024

Podium Global · Remote

- Delivered data projects for Intel's Sustainability team and The Recording Academy, presenting weekly to peers and mentors nationwide.
- Queried 2,500+ energy records with SQL (JOINS, CTEs, aggregates) to rank sites for Intel's next power plant, estimating a 5 to 8 percent cost reduction.
- Built Tableau dashboards letting leadership compare regions directly, improving analysis speed ~20% and planning efficiency ~25%.
- Developed Python/Pandas pipelines in Jupyter over Grammys.com traffic, visualized in Plotly, surfacing an awards-week spike and post-event drop that shaped content strategy.

Registered Behavior Technician (RBT)

June 2025 - Present

ABA Therapy Provider · Miami, FL

- Deliver ABA therapy 20+ hrs/week for 3 clients, managing clinical documentation and behavioral data with direct exposure to insurance authorization, billing, and Medicaid compliance.

PROJECTS

Casos — ABA Case Marketplace

github.com/DelPineAI/casos

Founder / Developer

- Built a two-sided marketplace where agencies post de-identified open cases and clinicians filter by location, hours, insurance, and urgency, addressing the ~15 open cases per week a single agency carries.
- Originated from 2 agency owner requests and validated across 7 discovery interviews before writing code.
- Implemented React/Tailwind over Supabase Postgres with row-level security enforcing cross-agency isolation, magic-link auth, edge functions powering prefetch-safe one-click email actions, and a PHI-safe schema.

Starboard — Client Accountability App

Distributed to behavior technicians

React, Supabase

- Distributed to behavior technicians, with point tracking redeemable for real rewards, a task library, and secure per-user sign-in over Supabase Auth.

Hardware

github.com/DelPineAI

Arduino Nano · C++ · VHDL · Basys 3 FPGA · Vivado

- Magic Box: a puzzle device built end to end from schematic through hand-soldered circuit, C++ firmware, and a 3D-printed enclosure.
- 7-Segment Display: derived truth tables and Karnaugh-minimized equations by hand, then implemented the design three ways using NAND-only gates, standard gates, and VHDL on FPGA.

ADDITIONAL EXPERIENCE

- Multivariable Calculus Tutor, FIU (2022 to 2024): 1 to 3 students weekly, up to 15 hours, covering basic math through Calculus III, with three-letter-grade average improvement across 30+ students.

SKILLS

Tools & Platforms: React · Node.js · Supabase/PostgreSQL · Docker · n8n · Figma · Git · Tableau · Pandas · Vivado · Arduino

Languages: JavaScript/TypeScript · Python · SQL · Java · C++ · C# · HTML/CSS · VHDL · MATLAB

Other: Bilingual (English/Spanish) · SQL Specialist Certification · Python Specialist Certification · Intel Global Tech Certification · Florida Bright Futures Scholarship · AICE Diploma Recipient

EDUCATION

Florida International University

Fall 2026

B.A. Computer Science, GPA 3.6, Miami, FL
